

iTrack and E6 Connection Guide

1. Download iTrack For E6.exe from <http://www.casevisiongolf.com/>.
2. Turn on iTrack and wait for it to start up. You should then be able to find iTrack's Wi-Fi network in your computer's network connections. Connect your computer to this hotspot. The default password for the iTrack hotspot is 12345678.

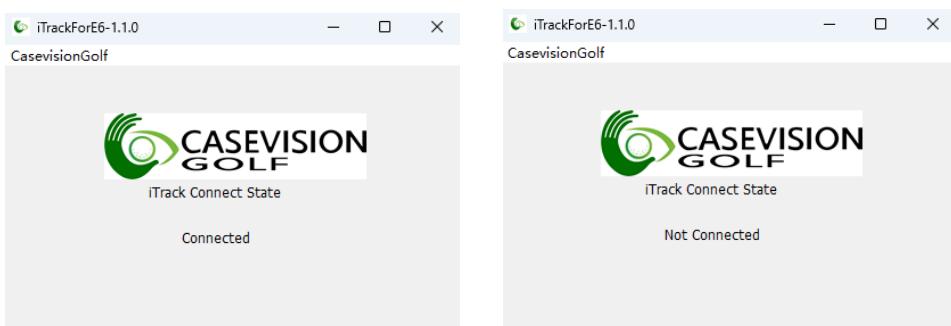

3. Run iTrackForE6.exe

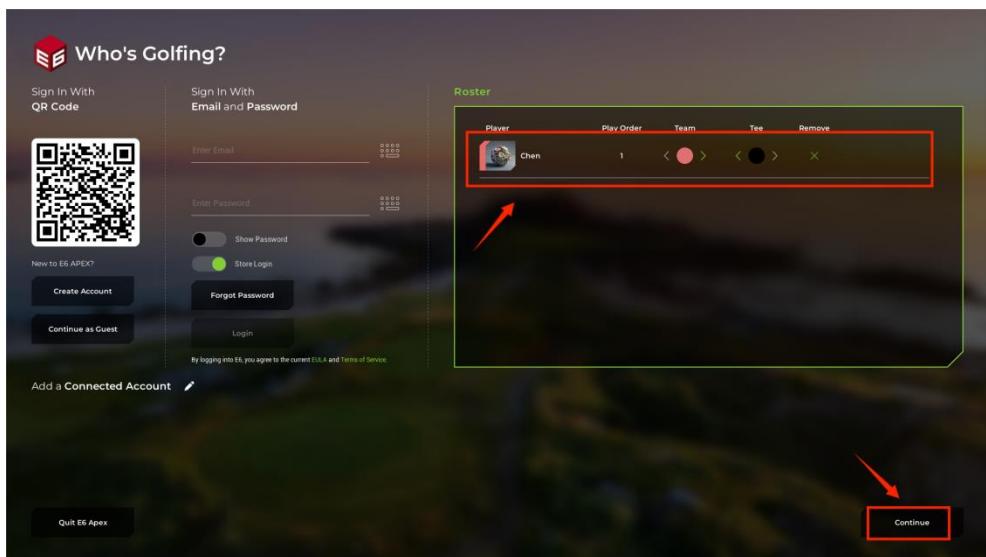

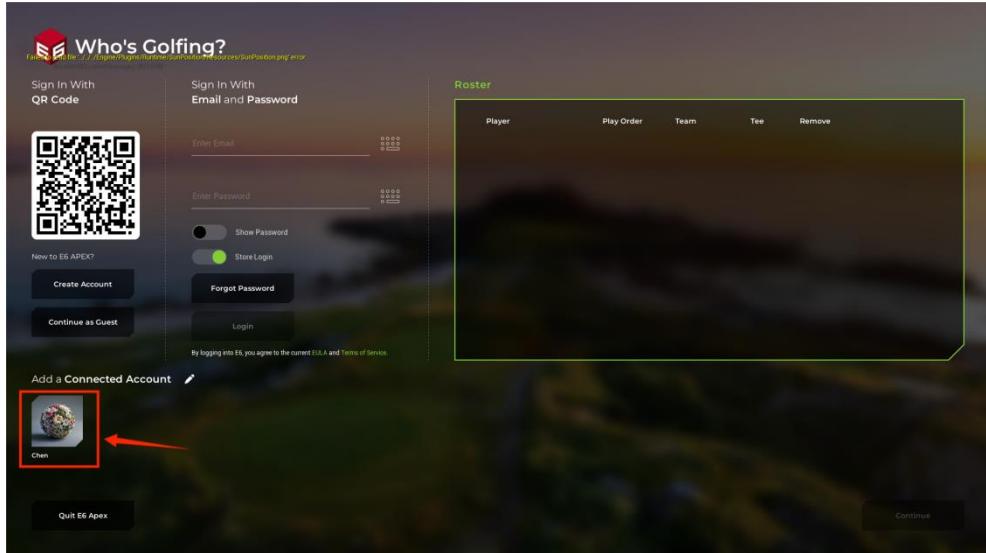

iTrackForE6

4. iTrackForE6 will display "Connected", indicating that the device is connected; if the computer is not connected to iTrack WiFi, the center of the plugin will display "No connect", indicating that the device is not connected.

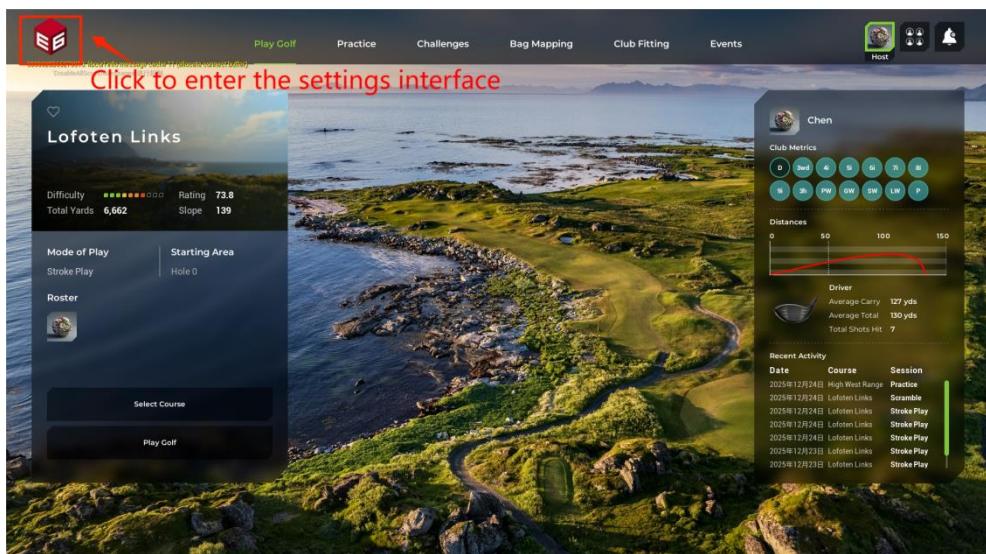

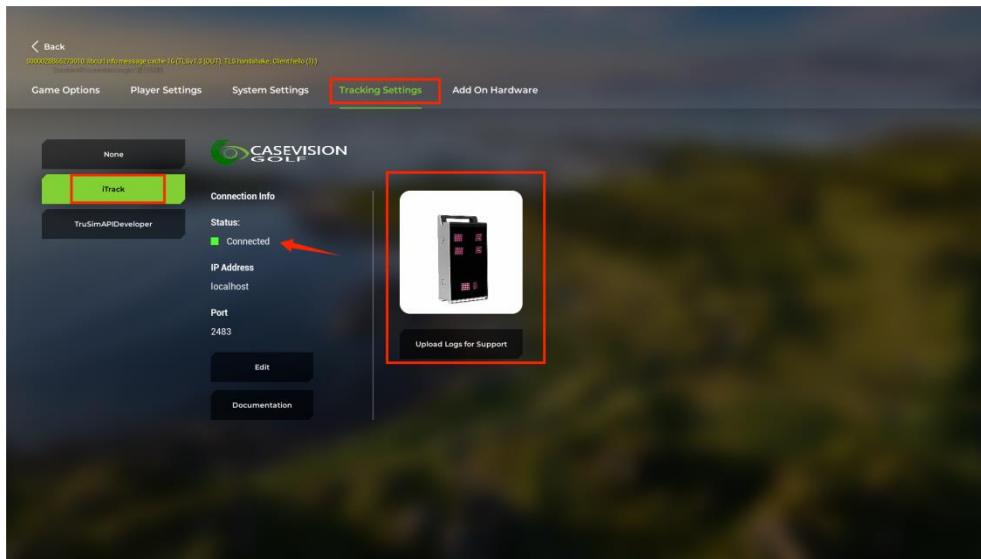

5. Launch the E6 emulator (launching the E6 emulator requires a VPN, otherwise the emulator will not recognize iTrack). After entering the emulator, add the connected account, then click

Continue to enter the main interface.

6. After entering the emulator's main interface, click the logo in the upper left corner to enter the settings. In the settings, you can check whether the emulator is connected to iTrack.

7. After checking the connection, return to the main interface, and you can enjoy the great features that the E6 simulator brings you: playing golf, practicing, challenges, bag mapping, club adaptation, and competitions.
